## Space Safety Programs

Opening door to **new market** of in-orbit services and transportation

- Autonomous Operations
- Satellite Intelligence
- Swarm Intelligence
- Active Debris Removal
- Refuelling/Refilling
- Cargo transportation in orbit
- Space Defense
- Managed Orbital Recycling
- Managed Material Storage
- Circular Economy in Space
- Sustainable Space Exploration

Record # of Launches  
New Safety Regulations  
Secure Orbits  
Sustainable Space

**Market Forecast \***

**\$14.3 bn.**

in cumulative revenues from  
In-Orbit Satellite Services  
by 2031

**Currently only preparatory activities, studies, and technology under development**

(mainly for future spacecrafts and launches)

**Place for multiple players**

**Letter of Intent for Supporting Collaborative Inspection of Target utilizing Lidar data from Multiple Cooperative Spacecraft – Elementary CPO Module for Multi-Agent Spacecraft Simulation Platform**

Dear Dr. Gebura,

This letter confirms our interest in your innovative approach to Multi-Agent Spacecraft and their application to In-Orbit Servicing, including the specific topic of Collaborative Inspection of Target utilizing Lidar data from Multiple Cooperative Spacecraft. We intend to support the development of your solutions through cooperation with Space scAvengers and other partners, with the objective to eventually deploy and operate services based on this technology.

In the future, we intend to operate Multi-Agent Spacecraft missions and services, including the usage of cooperative spacecraft with high level of autonomy. We will require predictive simulation to support Multi-Agent Spacecraft missions and services, including proper simulation platform/tools for GNC of such missions and services, potentially with HW in the loop.

Following is a brief overview of how we propose to work with Space scAvengers to help developing this technology:

- We can provide expertise to support the project in the definition of preliminary user requirements for the simulation platform and its link to operations.
- We can provide market analysis information that would allow defining the customer segments the most appropriated to the solution.
- We can help identifying and involving additional partners when relevant.

Telespazio Germany is a European leader in space operations and space engineering solutions & services. We combine over 40 years of experience in the space sector. We have played a major role in the European Space Agency's missions, as well as other national and European programmes, providing software solutions and spacecraft operations services. Today, as the private sector is growing and the needs are evolving, we are building a bridge between this sector and the institutional one by deploying our expertise through innovative solutions more adapted to a commercial approach.

# Roadmap

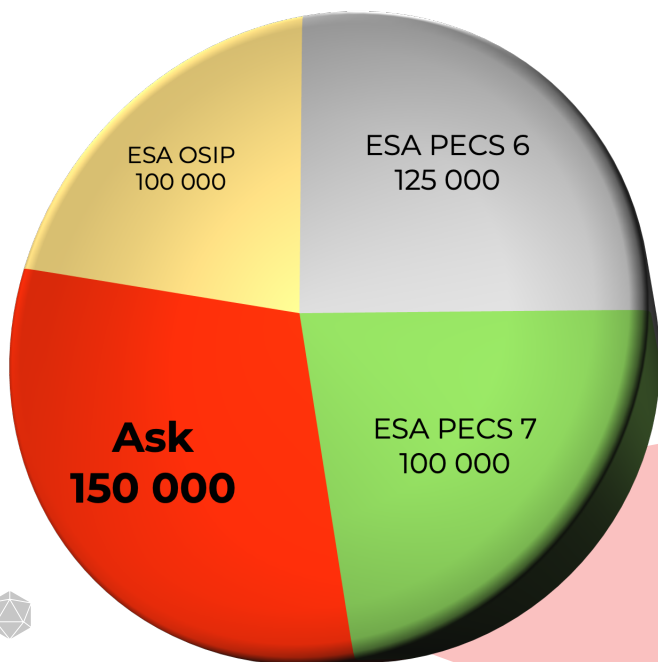

## Current ask

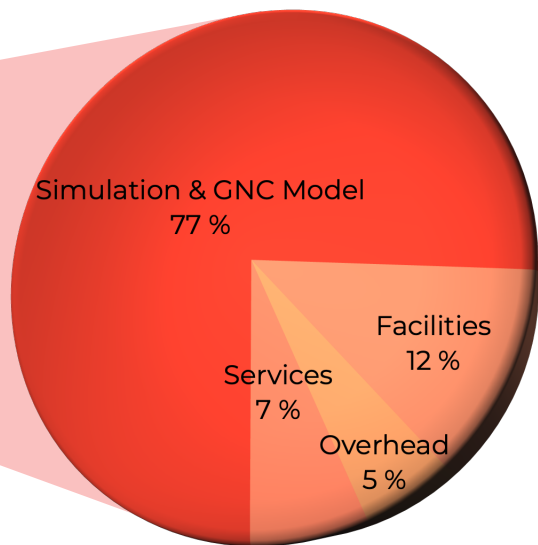

(Pre-seed – 12 Months duration)

# 150 000 €

To bridge over time-period until financing from potential grants becomes available

- Awarded and Finalized
- Awarded and Ongoing
- Preliminary agreed, but awaiting results

### To be submitted in 2024

- VV MVP 2024 - up to 250 000 €
- NATO DIANA Bootcamp - up to 400 000 €
- ESA RPA (1 proposal) - up to 125 000 €
- EIC Pathfinder (1 proposals) - up to 2 M€
- Horizon Europe (1 proposal) - up to 1.5 M€

FINALIZED

PRE-SEED INVESTMENT

Truly **Autonomous** Space Operations Finally **Enabled**

# SPACE SCAVENGERS

## Contact

Phone: **(+421) 911-866 272**

Web: **[spacescavengers.sk/investors](https://spacescavengers.sk/investors)**

Email: **[info@spacescavengers.sk](mailto:info@spacescavengers.sk)**

## USP

**Democratization of the in-orbit servicing market for all players**  
who want to take part in new challenges related to **hereby**  
**enabled** new type of  
**complex and cooperative space missions**

**Revolutionary Mission Simulator:** Automating orbital services with AI-powered, multi-agent simulations for precise, close-proximity operations

**Innovative GNC Development:** Tailored advanced GNC software for automated space missions, enhancing inter-satellite communication and autonomy.

**Dynamic In-Orbit Services:** Optimized systems for modular, AI-driven spacecraft fleets for versatile space missions, ensuring efficient coordination and risk reduction.

## IP

### 1. Simulation, ML Models and algorithms protection

- release early (base featured) version as open source
- access to higher value features will be through remote api (for security reasons)
- copyrighted **ML Models and algorithms** for cooperative mission execution
- **Copyrights for full version**

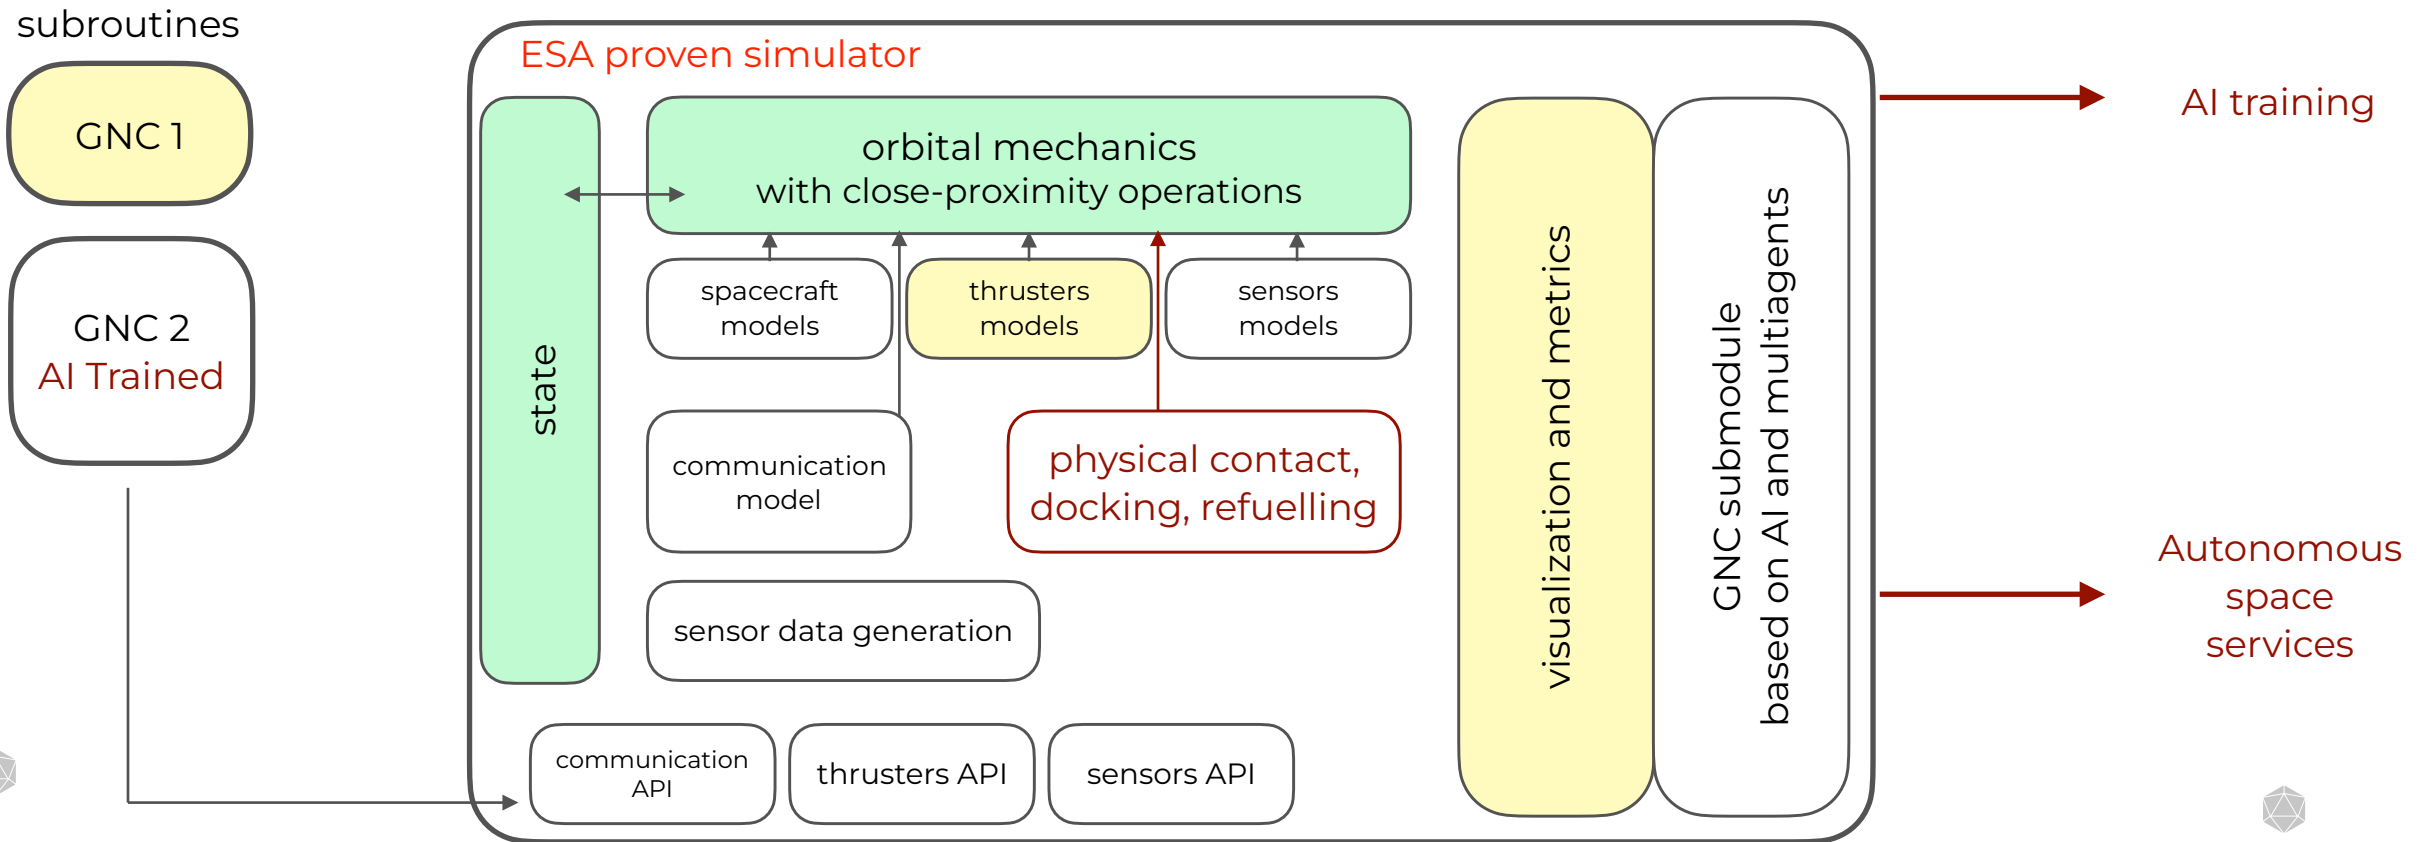

### 2. GNC protection:

- **patents** for GNC logics and particular sequences (connection, circumnavigation, etc.)

### 3. HW Technology protection:

- **patents** according to the development progress - i.e. connection mechanism, special sensors developments etc.

## Ongoing development of simulator tool

\* GNC - guidance, navigation, control

Developed

Ongoing

TBD

## INVESTMENT ASK

# PRE-SEED ROUND

Investment	Equity	Achievements and deliverables	Roadmap steps	Timeline reduction	Revenue generation	Hire
150 000 €	10%	Focus on simulator development until v2 of it is achieved <ul style="list-style-type: none"> <li>• Implementation of simple spacecraft models, thrusters, sensorics, inter-satellite communication</li> <li>• APIs for communication, thrusters, sensors, spacecrafts</li> <li>• Simplified GNC for cooperative missions</li> <li>• Visualizations and metrics generation</li> <li>• Simplified AI training and models</li> </ul> <b>Output:</b> Simulator MVP at level TRL 5 as usable Demo version which can be already licenced and generate revenue	1 2 3 4 5	None Ends: Jan. 2025	€	None
